Finished example.

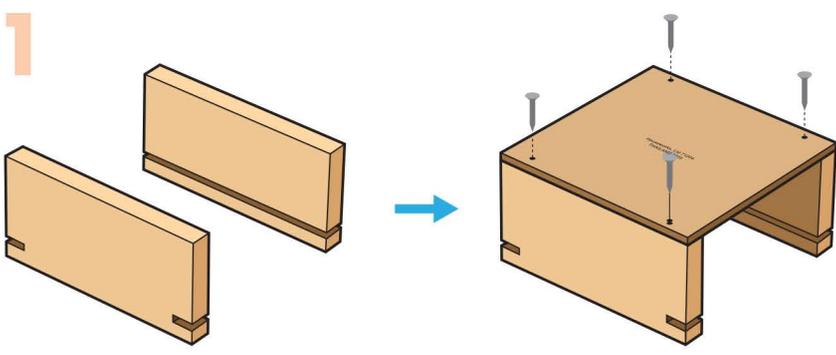

Contents:

- ALSO NEEDED:**
- Fine Sandpaper
 - Wood Glue (optional)
 - Hammer
 - #2 Phillips Screwdriver

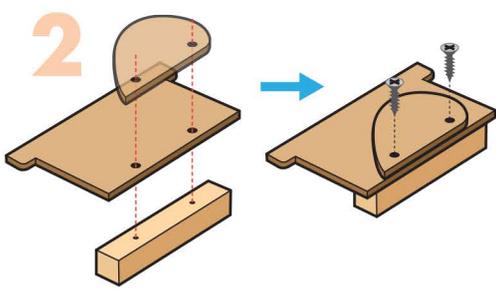

Assembly:

Start by sanding each wood piece to smooth any rough edges, following the grain. Glue is optional for added security. Let it dry completely.

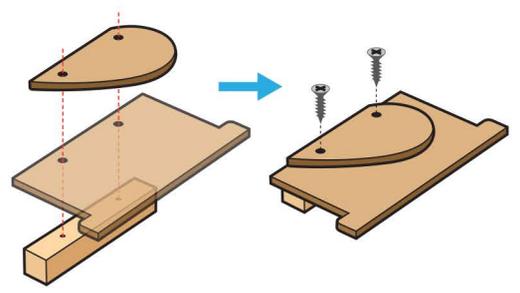

Step 1 — Stand the **front** and **back** pieces upright on their long edges, with the slots near the bottom and facing each other.

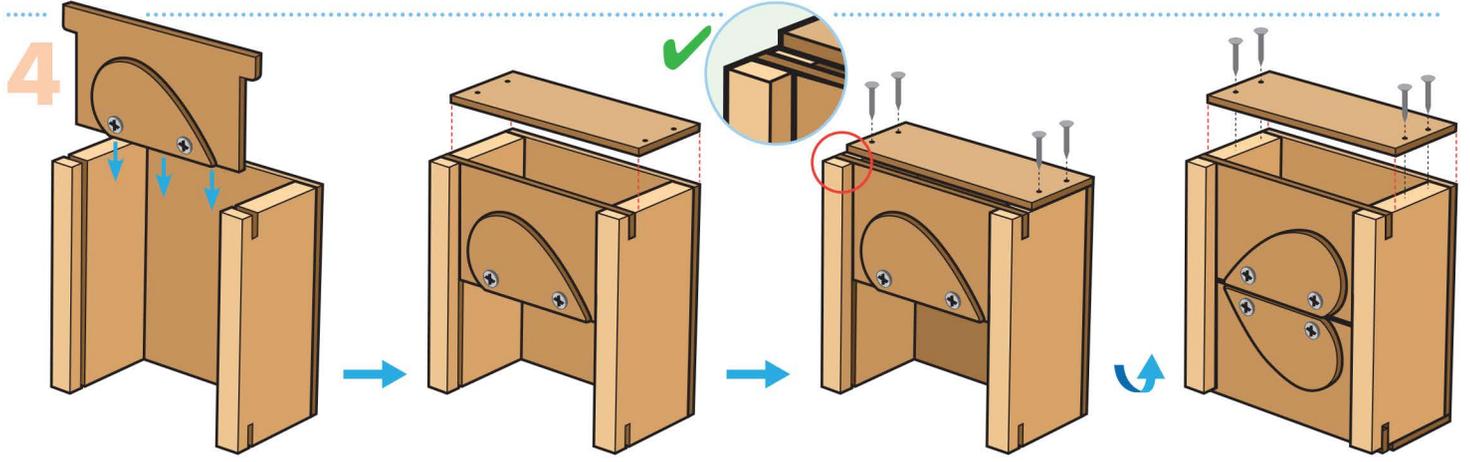

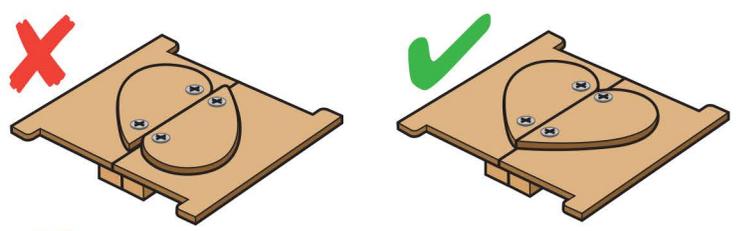

Place the **bottom** piece on top, with the nail holes aligned over the **front** and **back** pieces. Make sure the corners are even, then nail them together with four **nails**. Set this aside for now.

Step 2 — Place a **block** down with screw holes facing up. Stack a **sliding lid** and a **half-heart** piece on top of the **block**, aligning the screw holes on all three pieces. Attach them together using two **screws** and a #2 Phillips screwdriver. Repeat for the other **sliding lid**.

Step 3 — Check that you have a complete **heart** when the **sliding lids** are placed side-by-side. If not, unscrew and adjust the **heart** before moving on.

Step 4 — Stand the **project** on an open side. Slide one **sliding lid** into the slots. Place a **side piece** on top, **making sure not to cover the slots**.

Ensure the side and bottom edges are even, then nail them together with four **nails**. Turn the **project** over and repeat on the other side, **again making sure not to cover the slots with the side piece**.

Painting Tip: If painting, **avoid covering the slots**. **Painting too close to the slots may cause the sliding lids to stick**. Let the paint dry completely before applying the **stickers**.
